

Leon Bede

AI implementation & product development

Croatia | Croatian and EU work eligibility

[Portfolio](#) / [LinkedIn](#) / [GitHub](#)

I turn dealership workflows into software with AI-assisted development. I define the requirements, direct implementation, review the results and test the behavior. My work combines practical business context with structured data, validation and human review.

Remote AI implementation, automation and junior product engineering roles

SELECTED WORK

Automobili Galerija

Directed the design and AI-assisted delivery of a dealership platform. A shared vehicle record connects the public catalog with protected inventory, CRM, trade-in and publishing workflows. AI assists with vehicle-data extraction and reply drafts, followed by validation and human review.

Next.js, React, TypeScript, Supabase/Postgres, DeepSeek, Playwright

[Live product](#) / [Product decisions](#)

Intake Eval

Checks structured model responses and exact source quotes, then routes requests to human review. Compared two routing policies on 20 targeted synthetic cases: mismatches fell from five to zero. These are development results with AI-authored provisional labels, not general model accuracy.

TypeScript, DeepSeek, schema validation, automated tests

[Try the playground](#) / [Inspect the experiment](#)

Pagewright

Static landing-page templates exploring typography, structure and copy, with a free Lite version and documentation.

HTML, CSS, responsive design

EXPERIENCE

Automobili Galerija | 2021-present

Business operations & AI product development

Dealership operations experience informs the product requirements for inventory, inquiries, sales communication and publishing.

Hrvatski Telekom | Summer 2024

Sales / Customer Service Agent

Explained service options, handled customer needs and regularly exceeded individual sales targets.

TOOLS & METHODS

Product & AI: Requirements, workflow design, prompt design, AI-assisted implementation, review and iteration

Application & data: TypeScript, React, Next.js, Tailwind CSS, Supabase/Postgres, APIs

Quality & delivery: Validation, human review, GitHub Actions, Playwright, accessibility checks, Vercel

EDUCATION & LANGUAGES

FERIT Osijek | Undergraduate Computing studies, Software Engineering track | In progress

Croatian: native. English: working proficiency.
